Piers Table Lamp

The profile of the Piers Table Lamp oozes sophistication. Conceived by Ian Thornton, the columnar shape is made of clear glass into which silver cones are perfectly placed at the top and bottom to hold a thin rod in place, the metal and finial in a polished nickel finish. The disc-like base is also in polished nickel, the metal combining with the lustrous glass to gleam when the lights are switched on. Warming up the overall composition of the glass table lamp is an off-white shantung shade.
