# Cromwell

## Prairie Mirror Bronze

Each iron filament of the Prairie Mirror is carefully welded to the mirror's frame so that each piece is perfectly, evenly spaced. Then the frame is shaped into a 3-D waving motion and an outer frame is added to the edges. Brass braising highlights the base of the glass and edges of the mirror. The Prairie Mirror is deceptively large at 46 inch diameter and makes a strong statement wherever it hangs. Bevelled glass
